## NO MORE POOR ERGONOMICS WHEN HANDLING WHEELS

Wheel Trolley Easy Lift is a tool created to minimise heavy lifting when handling wheels. The Easy Lift is a further development of the very popular Wheel Trolley which, in the last 12 years, has been a widely used tool all over the world for the transport of tyres and wheels.

Wheel Trolley Easy Lift is, simply, an elevated Wheel Trolley which, through the use of springs, lifts and lowers in relation to its load.

When unloaded, the Wheel Trolley Easy Lift measures 580 mm in height.

When one or more wheels are placed on the top plate, it lowers – and a good ergonomic working height is thus maintained in relation to the top wheel. Easy Lift is designed for four wheels.

First and foremost, the use of Wheel Trolley Easy Lift is recommended when dismounting or mounting wheels at the auto lift, thus avoiding bending down to lift the heavy wheels on the floor – or lifting them up to the vehicle.

When loaded with wheels, the Easy Lift may be pushed to one side – and pulled back to the vehicle when the mechanical work has been completed.

Ergonomic height is also very helpful when wheels are processed in tyre servicing machines as well as when being placed in tyre racks.

## EASILY INTEGRATED INTO DAILY ROUTINES

Wheel Trolley Easy Lift was created to be easily and quickly integrated into the daily routines of automotive workshops. Using it requires no extra time – nor does it inhibit the various work processes. On the contrary. Wheel Trolley Easy Lift may easily be pulled out – and pushed aside. And it works entirely without electronics.

– a small investment which makes a difference to the working environment

The bottom line of a garage is improved when ergonomics are considered.

Consciously prioritising the minimisation of heavy lifting in the workshop may, first and foremost, mean fewer sick days.

Moreover, improved ergonomics with fewer lifts may mean increased productivity during the workday.

Both improve the bottom line.

Wheel Trolley Easy Lift does not contain advanced technology – but has the very important function that it protects against heavy lifting.
